

RO4700 MARINE RADIO

FU366-EUR
25/1 Watt VHF/FM

OPERATOR WARNING

Radio Ocean requires the radio operator to meet the requirements for Radio Frequency Exposure. Unauthorized changes or modifications to this equipment may void compliance with ETSI rule, Any change or modification must be approved in writing by Radio Ocean Corp

This equipment has been tested and licensed to comply with the limits for Class D Digital Marine Devices. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment can generate or radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications and human body. Never transmit before you make sure the antenna is properly located.

This device is only an aid to navigation. Its performance can be affected by many factors including equipment failure or defects, environmental condition and improper handling or use. It is the user's responsibility to exercise common prudence and navigational judgement, and this device should not be relied upon as a substitute for such prudence and judgement. Your Radio Ocean VHF radio generates and radiates radio frequency (RF) electromagnetic energy (EME), this equipment must be installed and operated in accordance with the instructions contained in this handbook. Failure to do so can result in personal injury and/or product malfunction.

1 Equipment Description

1.1 INTRODUCTION

Congratulations on your purchase of Radio Ocean's RO 4700 marine band radio. Base Station Radio with output power of 25/1 watt. It should be powered by a 13.8VDC power supply. The radio can support DSC (Digital Selective Calling) operation with specially designed DSC unit, which meets the standard of ITU-R, M493-10. When being connected with GPS, it will display the position (longitude and latitude) of the vessel. Compact fist microphone with digital keys makes for convenient operation of the equipment

Other features of the radio includes:

- Access to all available INTL channels (currently allocated).
- Allows memory all INTL channels for quick recall and memory scan.
- Provides as many as 20 user programmable names with MMSI, 10 distress calls and 20 individual calls for DSC communications.
- Rotary volume control with power on/off, rotary channel selector and rotary squelch adjustable knob give you more convenient operation of the radio.
- Outstanding performance of waterproof complying with Japanese Industry Standard level 7.
- 25 watts high output power allows you make contact with others in a long distance of marine communication and 1watt low power for short distance.
- Separate **16** button for quick selection of the emergency call on CH16.
- Adjustable brightness of backlit for good visibility of large LCD various circumstance.
- External interface easy to connect to GPS and external speaker.
- Mounting gimbal for firm and reliable location of your base station in difference condition.

1.2 ETSI INFORMATION

ETSI (European Telecommunications Standard Institute) has stipulated the specific requirements (**EN 301 025-1/2/3**) on marine radio with **class D DSC** feature, for use on non-SOLAS vessels.

2 CONTROLS AND LCD DISPLAY

2.1 BASE STATION (PANEL)

(1) Volume and Power On/Off

0-270° rotary control knob, turn clockwise to power on. Continue to turn until a comfortable audio level.

(2) Squelch

Use this knob to set the squelch threshold,

(3) CH/enter

Rotary encoder (no stop) with momentary push. Rotate this knob to change the current number and change values in menu mode or during programming. Press the knob to enter values

(4) Band / Save

Select band and set memory channels

(5) Cancel

the key to cancel last selection or change without saving. It allows step back one level on menu mode. It cancels DSC Distress calls & auto-retransmission of DISTRESS calls.

- (6) DSC /menu Use this key to enter Menu Setup or DSC Call Menu Call Mode is used for making DSC Calls. Menu Mode is used to setup the radio.
- (7) Hi/Low/mem Press and release HI/LO button to toggle between power output 25watt and output 1 watt. "HI" or "LO" icon appears on LCD display to indicate setting
Hold the key select memory channel mode
- (8) Scan Start and stop normal or priority scan and MEM channels and priority channels scan.
- (9) Watch Start dual watch or tri-watch, Stop dual watch or tri-watch.
- (10) 16 Press 16 key to quit all other modes and to into the priority channel.
- (11) DISTRESS this button is used to send a signal of distress in case of emergency. See DSC Operation for details of sending the call. This button is cover by a spring cover. The Distress Function or any other transmitted DSC function does not work unless a user's MMSI has been entered.
- (12) LCD: Large LCD (2"×1.5") with viewable area of 4×12 dot matrix makes it easy to be read.
- (13) Built-in Speaker Guarantee a clear ring and voice communication

2.2 BASE STATION (REAR)

- ① Antenna Jack: Connect a suitable antenna to your marine VHF radio to get a satisfying communication.
- ② Power Source Connect the radio to a 13.8 VDC power source.
- ③ External Speaker Connection Cable If need be, you can also use this cable to connect an external speaker.
- ④ GPS Connector Connect the radio to a GPS receiver to acquire the position and time information of your vessel

2.3 HANDSET

- ① Channel Up/ Down Press and release to change channel.
- ② 16 Press 16 key to quit all other modes and to into the priority channel.
- ③ Hi/Low: Press and release **HI/LO** button to toggle between power output 25 watt and output.1 watt
- ④ PTT: Push to hold to transmit; release to receiver.
- ⑤ DSC/MENU Use this button to enter Menu setup or DSC call
Menu Call Mode is used for making DSC Calls.
Menu Mode is used to setup the radio
- ⑥ Alphanumeric Alphanumeric symbol keys total 12 units, it is used to input alphabet and numbers also left shift, right shift ,cancel enter.
Under normal operation, the numerical key (0 – 9) enable direct channel access function.
Whenever 1st digit key in, the display will flash the digit # but not yet tune the channel. If no more key in within keystroke time out , the channel will be tuned immediately. If another digit key pressed

within the time-out period, the key in 2-digit channel # will be recalled immediately.

Under the Menu mode, those keys can be used to entry the MMIS# and set the required Numerical data.

Besides the numerical data could be key in, those keys could be used to enter the channel name and edit the Buddy list

Key	0	1	2	3	4	5	6	7	8	9
Normal mode & Menu Mode	0	1	2	3	4	5	6	7	8	9
Edit Mode 1 st stroke	(-	A	D	G	J	M	P	T	W
2 nd stroke)	.	B	E	H	K	N	Q	U	X
3 rd stroke	%	,	C	F	I	L	O	R	V	Y
4 th stroke		/	?	!	:	#	'	S	&	Z
5 th stroke	0	1	2	3	4	5	6	7	8	9

Press CH UP/DOWN to move the cursor Up/Down Press </> to move the cursor Left/Right The highlighted digit will be blinked and allow user to over-write the new digit or character. After edit finish, press ENT key to confirm the changes and quit the menu. (note: short press </> keys means to move the cursor Left/Right, long press </> keys show cancel /confirmation =

2.4 LCD SYMBOL AND MEANINGS

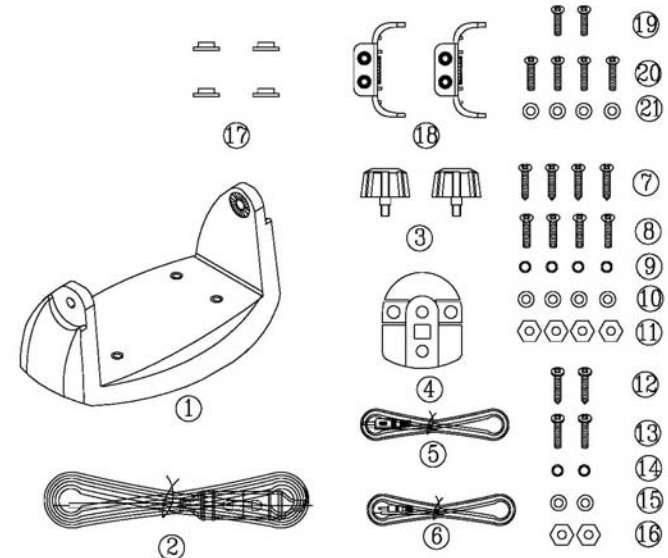

SYMBOL	MEANINGS
HI LO	Transmission power high (HI) 25W or low (Lo) 1W.
✉	Indicates an incoming DSC call or blank to notify you of any unread call log messages.
TX	Indicate that the radio is Transmitting
RX	Indicate that the radio is receiving a radio signal.
M	Indicate the current channel has been saved in memory.
📁	Indicate the current work at Memory mode (Channel is selected at saved channels).
DU TRI	Indicate Watch state.
ALT	A weather alert signal are received, In US and Canada
88	Channel selected.
I	Indicates channel bank for VHF radio operations and regulations.
PSCAN	Indicate the current work in priority-scan mode.
SCAN	Indicate the current work at the scan mode.
DSC	DSC capability is available.
🔋 Low	Battery Low indicates vessel battery voltage is low.
X	Channel is temporarily deleted from the all scan operation.
ATIS	Enable for use In European in inland waterway other wise blank
Dot Matrix	Display indicates special conditions or radio functions.

3 INSTALLATION

3.1 SUPPLIED ACCESSORIES

Manufacturer supplies you the following accessories as soon as you purchase this RO4700 radio:

- (1) Mounting gimbals (1 set)
- (2) Power Supply Cable (1 set)
- (3) Mounting Knob (2 pcs)
- (4) Wall Hanger (1 pcs)
- (5) GPS Connection Cable (1 set)
- (6) Speaker Cable (1 set)
- (7) Self-tapping Screw for Fixing Mounting Gimbals (4 pcs)
- (8) Flat Screw for Fixing Mounting Gimbals (4 pcs)
- (9) Plain Washer (4 pcs)
- (10) Spring Washer (4 pcs)
- (11) Nut (4 pcs)
- (12) Self-tapping Screw for Fixing Wall Hanger (2 pcs)
- (13) Flat Screw for Fixing Wall Hanger (2 pcs)
- (14) Plain Washer (2 pcs)
- (15) Spring Washer (2 pcs)
- (16) Nut (2 pcs)
- (17) Cap for Flash Mounting Kit (4 pcs)
- (18) Flash Mounting Kit (2 pcs)
- (19) M5*10 Screws for Flash Mounting Kit (2 pcs)
- (20) M5*32 Screws for Flash Mounting Kit (4 pcs)
- (21) Plan Wash for Flash Mounting Kit (4 pcs)

3.2 LOCATION REQUIREMENTS

To more conveniently and efficiently use your marine radio, find a mounting location that:

- Is far enough from any devices like devices to avoid any interference caused by the speaker magnet in your radio during their operation;
- Provides accessibility to the front panel controls;
- Allows connection to a power supply and an antenna;
- Has free space nearby for installation of a handset hanger;
- Where the antenna can be mounted at least 3 feet from radio.

3.3 CONNECTIONS

POWER SUPPLY

You radio should be powered by a 13.8VDC power supply. Red cable is for positive pole and the thicker black one is for negative pole.

EXTERNAL SPEAKER

If needed, you can connect your radio to an external speaker with the supplied connection cable. White cable is for positive pole and the thinner black one is for negative pole.

GPS EQUIPMENT

When your marine radio RO4700 is connected by the GPS cable to a GPS equipment, it can obtain the information of both its current location (longitude and latitude) and the local GMT.

GPS CABLE

Line up the arrow on the connector with the arrow on the GPS cable (supplied) and then plug together. The GPS cable has eight pins as follows:

Pin	Wire	Function
1	Red	Not used.
2	Orange	NMEA OUT (+)
3	White	Not used
4	Green	NMEA IN (-) from GPS navigation receiver
5	Yellow	NMEA IN (+) from GPS navigation receiver
6	Black	NMEA OUT (-)
7	Blue	Not used
8	Grey	Not used

NEMA 0183 Version (1.5 to 3.0) sentence format:: GLL, GGA, RMC, GNS.

Note: never short wires, this may cause damage.

Connecting: GPS cable round plug to radio and the wire of yellow and the green connect to GPS navigation receiver.

To RO4700 GPS connector

ANTENNA

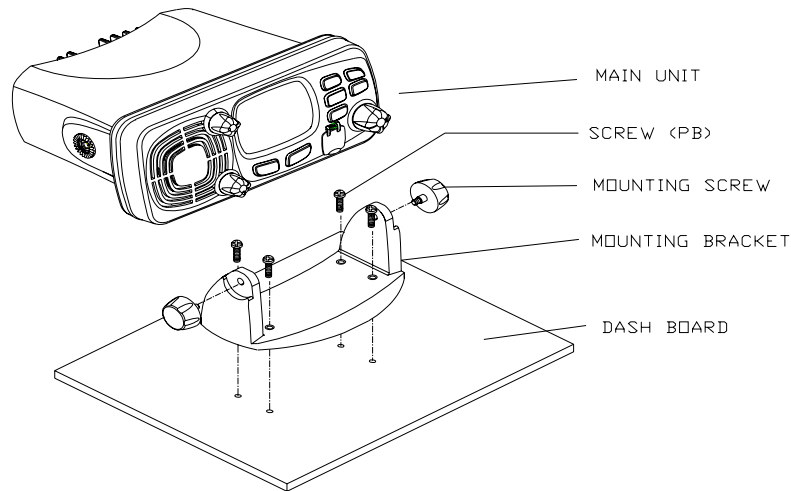

A very important part for the performance of any communication system is a suitable antenna. Consult your dealer about antennas and ask them to help to mount your radio.

3.4 MOUNTING THE RADIO

Mount the radio on your vessel:

1. Find a appropriate location defined in section 3.2;
2. Place the mounting bracket on the location surface, use a pencil to mark the location of four holes where the fixing screws are to go into;
3. Caution: Be careful tot to drill through the mounting surface.
4. Remove the bracket, drill four holes smaller than the screw diameter, then re-place the mounting bracket on the surface aligning the drilled holes;
5. Insert the four fixing screws and secure the bracket to mounting surface using the supplied bolts, spring washers, plain washers and nuts;
6. Caution: if you can not reach behind the mounting surface to attach the nut on the bolts, use the supplied self-tapping screws to fasten the bracket.
7. Insert the four fixing screws and fasten them with a Philip screw-driver with attention not to screw too tightly;
8. Mount the base station onto the bracket with notice of the matching of the protuberances on the both inner side of the bracket and the pits on the two sides of the base station (the selectable pits on the sides of the radio allow you adjust the direction of the radio face to satisfy your easy-to-read-and-use, 15° for each rotation and totally 45° tolerance);
9. Attach the supplied mounting knobs from the two sides of the bracket to fixing the base station securely.

Caution: Keep the radio and handset at least 1 meter away from any magnetic devices such as compass on your vessel.

The supplied universal mounting bracket allows you to mount your base station from overhead or on dashboard with a big scope of angle as many as 45°.

To change the angle after installation:

10. Loosen the mounting knob at the sides of gimbal, first.
11. Then adjust the base station to an appropriate direction with matching of the protuberances on the inner sides of gimbal and pits on the outer sides of base station.
12. Tighten the knob to secure.

3.5 ANTENNA MOUNTING/THE EME EXPOSURE

For optimal radio performance and minimal human exposure to radio frequency electromagnetic energy, make sure the antenna is:

- Connected to the radio before transmitting;
- Properly mounted;
- Locale where it will be away from people:
- Locate at least three feet (91 cm) from the Base Station transceiver and Handsets;
- Use standard type of PL259 connector

3.6 MOUNTING THE HANDSET

Find a mounting location near the base station to mount the wall hanger for handset. The distance between the base station and the wall hanger should be less than the length of the handset cable.

Caution: Keep the radio and handset at least 1 meter away from any magnetic device such as compass on your vessel.

3.7 RECESSED INSTALLATION

1. Tape the installation template onto the chosen location site.
2. Cut out the area marked by the solid dark line. (The dashed line indicates the total area that will be covered by the radio fascia after installation.)
3. Remove the installation template and slide the radio into the cavity.
4. Working from the rear of the bulkhead, align the ratched outstand on each side of the radio with the central hole in each mounting bracket.
5. Use the two short M5x10 screws to screw the mounting brackets to the sides of the radio.
6. Slide two M5x32 screws through the screw hole in the mounting bracket, then attach the lock nut and the stopper. If your bulkhead exceeds 13mm, the stopper nut can be discarded if necessary.
7. Tighten the M5x32 screws until the radio is held against the rear of the bulkhead.
8. Tighten up the lock nuts to secure the installation.

BASIC OPERATION

4.1 TRANSMISSION AND RECEPTION

CAUTION: Transmitting without an antenna may damage the radio.

1. After the radio has been installed, make sure of the power supply and antenna being properly connected.
2. To rotate the **VOLUME/POWER** knob clockwise turn on the radio and select a comfortable volume level.
3. To turn the **SQUELCH** knob clockwise until the background noise disappears.
4. Rotate **CH** knob to select channel
5. Press Hi/Lo key to select high power or lower power.
6. Press the **PTT** (Push-To-Talk) button on the handset to make the radio into transmission mode. TX indicator on LCD is displayed.
7. Speak clearly in a normal voice into the microphone.
8. Once the transmission is finished, release the **PTT** button. The radio is at receive mode, icon Rx appear on screen.

4.2 CHANNEL SELECTION

4.2.1 Channel 16 Key gives you a quick access to the channel 16

Channel 16 is the distress and safety channel. It is used for establishing initial contact with another station and for emergency communications. Channel 16 is monitored during dual watch. While standing by, monitoring channel 16 is a must.

4.2.2 INTL MODE

There are all 55 International channels listed in the channel list section. These channel groups may be specified for the operating area. To select the desired channel: rotate **CHANNEL/SELECT** knob to select channel in the active band. With the knob being rotated, the channel is displayed on the LCD display;

4.3 MEMORY CHANNELS

4.3.1 Memory Channels selection

- 1 Press and hold the Hi/Lo/ mem button to enter the MEM mode;
- 2 At mem mode, rotate CHANNEL/SELECT knob to select MEM channel in the memory. With the knob being rotated, the

channel and the icon M will be turned on for indication that channel be saved in MEM lists displayed on the LCD display

4.3.2 SAVE favorite the Channels

Your can store in the hope of channels as favorite channel. Program the FAV channel and store Process as follow:

1. At normal mode, tune to the desired channel and then press and hold the BAND/SAVE key to save it as Favorite channel. The icon  will be turned on for indication that channel be saved in FAV list.
2. Then tune to next desired channel and repeat the keystroke sequences till all desired channels be programmed / saved.

4.3.3 MEM Channels delete

- 1 Delete the channel from the MEM list at Normal mode. Select the target channel with icon ON. Press and hold the BAND/SAVE key till the icon turn OFF. The target channel will then be deleted out from the MEM list. Repeat the keystroke operation for those unwanted channels.
- 2 If no channel has been programmed, an error beep occurs with indicate error message.

4.4 Transmit time-out timer (TOT)

When the PTT button on the microphone is held down, transmit time is limited to 5 minutes. This will avoid unintentional transmissions. About 10 second before automatic transmitter shutdown, a warning beep will be heard from the speaker(s). The transceiver will automatically go to receive mode. Before transmitting again, the PTT button must be released and then pressed again.

4.5 Scan:

Scanning is an efficient way to locate signals quickly over a wide frequency range. The transceiver Scan mode has 2 types available: normal scan, memory channels scan. If no memory channels the way is normal all scan (1.2.3.4...), if there are memory channels only scan memory channels, every one's have a normal scan and the priority scan

- 1 During normal scan Press and hold SCAN Key over 3sec, the Priority scan mode (1,16,2,16,3,16...) will be selected. P-scan icon will be appear on LCD Press and hold SCAN key over

3sec to turn it back to normal scan, the scan mode icon will be display.

- 2 During the SCAN modes: Press Up/Down key (CH knob clockwise/anti-clockwise) will change the scan direction.
- 3 Press SCAN key again will terminate the scan operation and stop at the last used channel. Press CANCEL key will also terminate the scan function and state at the last used channel It also can be to cancel by 16.PTT.

4.6 Watch

4.6.1 Dual watch

Press Watch key to activate the DUAL WATCH mode. Monitor the current channel and Ch 16 in cycle. Icon "DU" will appear on the LCD.

4.6.2 Tri-watch

Press and hold Watch key to activate the TRI WATCH mode. Monitor the current channel, CH 16 and CH 9 in cycle. Icon "TRI" will be turn ON To quit the mode, press WATCH, 16, DSC/MENU, CANCEL key, Press PTT key to TX mode of current channel

4.7 POSITION INDICATION

Your transceiver can display the position of the vessel's (longitude and latitude) as well as time and data information, if connected to a GPS receiver; if no GPS equipment to be connected,an alert tone of 1-minute duration witch can cancelled By any button is sounded at 4 hour intervals to encourage manual input of positional data . Once no manual input is made for 23.5 hours, GPS disappears from the screen, the position data transmitted goes to 9's and all the time data goes to 8's.

DISTRESS 23'20.1234 N 100'15.1002 E 08:10 UTC
--

5 DIGITAL SELECTIVE CALLING

5.1 GENERAL

DSC(Digital Selective Calling) is a semi-automated method of establishing a radio call, it has been designated by the International Maritime Organization (IMO) as an international standard for establishing VHF, MF and HF radio calls. It had

also been designated part of the Global Maritime Distress and Safety System (GMDSS). It is planned that DSC will eventually replace aural watches on distress frequencies and will be used to announce routine and urgent maritime safety information broadcasts. This new service will also allow mariners to initiate or receive distress, urgency, safety and routine calls to or from another vessel equipped with a DSC transceiver.

5.1.1 MARITIME MOBILE SERVICE IDENTITY

An MMIS is a nine digit number used on Marine Transceiver capable of using Digital Selective Calling (DSC). This number is used like a telephone number to selectively call other vessels. Refer to section 6.12 (USER MMSI ENTRY).

5.1.2 HOW CAN I OBTAIN A MMSI ASSIGNMENT?

Contact your dealer.

WARNING

This radio is designed to generate a digital maritime distress and safety call to facilitate search and rescue. To be effective as a safety device, this equipment must be used only within communication range of a shore-based VHF marine channel 70 distress and safety watch system. The range of signal may vary but under normal conditions should be approximately 20 nautical miles.

5.2 DSC CALL TYPES

Press the DSC/MENU key to pop up the menu for user to select the DSC call type to send. Note that only four calls can be shown at any one time on the screen.

Press + / or rotate the CH knob scroll up and down the call types until the cursor is positioned at the desired option.

Press **the Ch knob** the call types are:

Call Type	Description
LAST CALL	Recall last call no matter what type of call received at last.
NEW CALL	Make a new call, by inputting the MMSI or pick up from the list max 20
GROUP	Sends transmissions that are only received by radios that share a common group MMSI number, up to 3 group MMSI numbers can be stored and call.

ALL SHIPS CALL LOG

Make an Urgency or Safety call to all ships.

Allow a review of all stored Calls by number and time of call. An individual call type can be placed to the selected MMSI/NAME in the LOG. The call at the end of the list is automatically erased. The earliest call stored at the end of the list. There is 20 calls could be stored.

DISTRESS Log

Allow a review of all stored Distress calls by number and time of call. The call at the end of the list is automatically erased. The earliest call stored at the end of the list. There is also 10 calls could be stored.

POS REQUEST

The option enables you to request GPS position information from any vessel for which an MMSI number is known, such request can pick up from Buddy list or manual entry.

EXIT

quit the menu mode

DISTRESS

A specific Distress key is used to make the distress call.

The call send out the position and time information from the input NMEA data along with your MMSI number. This digital information lets other ships and shore equipped with appropriate DSC equipment know where you are and that you are in a distress situation, except immediate help is needed, never use the distress call.

5.2.1 Sending a distress Call

Note: Only having a MMSI code of your radio and DSC enable, can you initiate a DSC transmission. To enter the MMSI code see 6.9.1.

1. Open the red cover label DISTRESS.
2. Press the **DISTRESS** key momentarily.
The Text area of the display reconfigures to show the Nature of Distress menu.

3. If time is available, rotate the **CH** knob to select the Nature of Distress, the default are "UNDEFINED".
4. Hold down the **DISTRESS** key for more than 3 seconds Until you see the distress call sent message on the screen. The whole display screen to flash and beep loudly.
5. If DISTRESS button is released before 3 seconds, the initiation of distress call is not taken into effect and If button is pressed for more than 3 seconds, DISTRESS call is sent whether channel 70 is busy or not. When Distress is sent, the acoustic alarm goes to a continuous tone until acknowledgement received or the DISTRESS call is cancelled.
6. during the distress call sequence, the radio simultaneously watches Channel 70 for a DSC acknowledgement and Channel 16.
7. when the distress call is acknowledged, the acoustic alarm stops and the radio returns to normal operation on channel 16, with high power relay to the connected station via the microphone
8. If no acknowledgement is received, the unit retransmits the DISTRESS call at random intervals of 3.5 to 4.5 minutes until a response is received or the call is manually cancelled, by pressing CANCEL button for twice.

5.2.2 Send an All Ships Call

1. Press **DSC /MENU** key. Rotate the **CH** knob to select "ALL SHIPS". Press the **CH** knob to enter ALL SHIPS. The All Ships menu displays LCD the categories from which you can select

2. Rotate the **CH** knob to select: SAFETY, press the **CH** knob to enter All Ships Safety send.
3. Once the call is sent, the text area of the display momentarily shows the Calling All Ships message. And then the radio returns to normal VHF operation on channel 16 with high power. Press PTT to talk.

5.2.3 Send a GROUP Call

This feature allows the user to contact a group of specific vessels using DSC and to automatically switch to a desired channel. Before sending a GROUP call, you must be set the GROUP MMSI

1. From the DSC/MENU select the GROUP CALL item. Press the **CH** key, the screen displays the names of your groups.

2. Select the group that you want to call, then select the channel Press the **CH** knob to send a group call, Once the call is sent, the Text area of the display momentarily shows the Calling group message.
3. After the GROUP CALL is transmitted, the radio will return to normal VHF with the designated channel.
4. Press the PTT to start talk.

5.2.4 MAKE A ROUTING CALL (INDIVIDUAL)

You can make an individual call, either to a ship or to a boat station.

5.2.4.1 Manually Sending an Individual Call

1. Press **DSC /MENU** to DSC mode, then select "NEW CALL". Press the **CH** knob The arrow is pointing to <MANUAL>

2. Press the **CH** knob again access manual enter ID screen, enter the MMSI number, when MMSI entry is complete, press the **CH** knob to accept the selection
3. Then rotate the **CH** knob to select the working channel and press the **CH** knob to accept select.
(Only in the case of a call to a ship, it is permitted to enter a talk channel; a call to a coast station, the coast station will specify the channel to talk on in its acknowledgement.)
4. the radio summarizes the call details and ask for confirmation to send the call (send?).
Press the **CH** knob again to send the call. *Once the call is sent, the Text area of the display momentarily shows the Calling message., then display a awaiting acknowledgment.*

6. *If the call is acknowledged, press PTT to talk*
7. *If the call does not get with in 16 seconds, the radio prompts you to resend the call.*

5.2.4.2 Sending an Individual Call (MMSI stored in Buddy list)

1. Press **DSC** /MENU to DSC mode, then select "NEW CALL". Press the **CH** knob, the arrow is pointing to **<MANUAL>**
